

MANIPULATIVE USER INTERFACE SYSTEMS AND METHODS

Abstract of the Disclosure

Two previously virtual concepts, such as, for example, the concept of "me" and the concept of "my data" are reified into physical objects which can be physically manipulated and interact with legacy technologies such as, for example, desktop or portable computers. In one exemplary embodiment, a portable computing device in the form of an animal, such as, for example, a bear, with a manipulatable user interface, is used to log onto and off of various computers.
